# Amazon Warehouse Business Process Flowchart

Here is a functional diagram illustrating the steps and how they flow in an Amazon warehouse, using business process modeling notation.

The symbols used in this flowchart are as follows:

- Participant: Represents a person or system that is involved in the process.
- Data flow: Represents the movement of data between participants.
- Decision: Represents a point in the process where a decision must be made.
- Connector: Represents a connection between two different parts of the flowchart.

Here is a brief explanation of each step in the process:

1. The customer places an order on Amazon.
2. The picker receives the order information from the database.
3. The picker locates the product in the warehouse.
4. The picker packages the product.
5. The packer updates the inventory in the database.

6. The packer generates a shipping label.
7. The dispatcher determines whether the product matches the customer order
8. The dispatcher ships the product to the customer.
9. The customer receives the product.
